

# GRIP SHEETS for Pallet Stability

We offer Grip sheets which are interleaving sheets placed in between each layer of goods placed on the pallet. Grip sheets are made of recycled kraft paper with a special coating on both sides which form dots. These dots hold the goods by friction and thereby offering stability for goods while in transit.

We also have another variety of Grip Sheet called the Clear Grip made of PET. These PET Grip sheets are typically used for internal warehousing with repeated reuse of these PET Grip Sheets. These two types of Grip sheets can also be used to increase stack height for both **internal warehousing** and for **external transportation**.

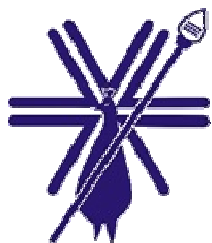

Increased the stack height by using Grip Sheets

**Bags** are titled after placing Grip sheet between layers & no stretch film is used.

**Boxes** are titled after placing Grip Sheet between layers & no stretch film is used.
